## Your animal enclosures are a long-term investment.

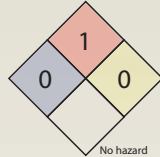

Quality materials that make for a sturdy construction; promotes safety; and is easy to clean; adds **longevity**, **value**, and **efficiency** to your facility.

Gator Products uses materials that are designed to last a long time and hold up to the rigors of the industry. By using materials that do not rot, rust, or absorb water; we ensure that your investment will last as long as possible.

The kennel structure is built from a material with the following flame ratings:

● UL 94v0

The product is nonflamable and will not continue to burn after ignition without an external fire source.

The materials we use are by nature waterproof.

Mold resistant.

We do not use silicone because silicone simply does not last and dogs or cats tend to ingest it - causing trips to the veterinarian.

All materials are Lead-free

The kennel structure is made from 35% post-industrial recycled materials. Both the gates and the kennel itself is 100% recyclable.

For more information on the materials used; head to [www.gatornetproducts.com/materials.html](http://www.gatornetproducts.com/materials.html)
